

What does the solution look like

The ideal solution would be an mobile app that can be downloaded

Kelly Sullivan

A free app available to all mobile operating systems.

Kelly Sullivan

This solution could be as simple as a calendar or grow to be very sophisticated.

Kelly Sullivan

Why my solution?

As far as I have found this app does not already exist.

Kelly Sullivan

There are complicated ways that people could track this themselves but an app could be designed to track it efficently

Kelly Sullivan

There are business level inventory trackers but that woulf be too complex for houshold needs.

Kelly Sullivan

What is limiting my solution

I currently do not know how to create an app that would be a working solution to this problem

Kelly Sullivan

I could make a spreadsheet that could act as a solution that isn't much easier than just keeping track of it yourself

Kelly Sullivan

It could be hard to conivince people this is something they need

Kelly Sullivan

It could be difficult to advertise this to the people who would benefit from it.

Kelly Sullivan

Business potential

Lots of in app advertisment potential

Kelly Sullivan

There could be more elite features would be available with a subscription.

Kelly Sullivan

On the grand scale, the app would have a lot of potential for partnership with major companies.

Kelly Sullivan

There are many additional feactures that could be added in the future.

Kelly Sullivan

Solution features

Sends a notification when the product is close to the expiration date

Kelly Sullivan

Sends a notification when a product is almost gone according to user trends

Kelly Sullivan

Could track all household goods from groceries to cleaning supplies.

Kelly Sullivan

The main format of the app would be a calendar

Kelly Sullivan

The user would enter a product into the tracker and input how long it ususally takes for the user to finish the product

Kelly Sullivan

Generates a shopping list
